

iCAM Creativity

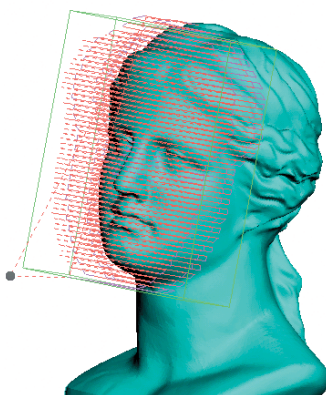

iCAM CNC Routing Machines are well suited to 2.5D routing, which is ideal for creating plugs and moulds for the fibreglass and vacuum forming industries.

Businesses in the Creative and Display Industries can also enjoy the flexibility and ease of use that comes with running an iCAM machine.

Advances in CAM software allows double-sided and large objects to be produced in slices that can be glued together to create complete 3D objects.

One example of where slicing can be used is in the production of boat hull plugs. Plugs of virtually any size can be produced in slices and segments, typically 100mm x 1200x2400mm in size.

iCAM offers leading edge 3D technology at an affordable price.
